Worm Prevention Information

- **Standard Dewormer** - given for treatment and prevention of the common roundworm and hookworm infection. These worms are found in the environment or are passed to puppies when nursing. In most cases, deworming will need to be repeated if treating an active infection.
- **Tapeworm Dewormer** - given for treatment of tapeworms. Tapeworm infections develop when a dog or cat eats an infected flea. This injection of dewormer will treat tapeworms however, it is also important to prevent fleas (to avoid re-infestation). Flea prevention is recommended if your pet has tapeworms. You can order Flea and Tick prevention directly from our store on the website, www.GaPeachPAWS.com.

Flea and Tick Prevention Recommendations:

- Simparica
- NexGard
- Seresto Collar
- Trifexis*
- Revolution Plus*
- Advantage Multi*

*Flea and heartworm combined

- **Heartworm Prevention** - is a prescription medication that can be purchased with the approval of a veterinarian. Your dog must test negative for heartworms to get prevention safely. Puppies younger than six months of age can start prevention under a veterinarian's supervision. Prevention comes in several forms; injections, oral medication, or topicals. If your pet tested negative for heartworms today and you would like a prescription for heartworm prevention, please let us know. We can be contacted using the contact information, above. You can order heartworm prevention directly from our store on the website, www.GaPeachPAWS.com.

Heartworm Prevention Recommendations:

- Tri Heart Plus
- Heart Guard Plus
- Intercertor Plus
- Trifexis
- Revolution Plus
- Advantage Multi
